Why Are We So Depleted Of Magnesium?

Our body receives magnesium (mostly) through green leafy vegetables, legumes and grains and also through our water.

Unfortunately the minerals in our soils today are depleted, as our food is degraded through agricultural use of chemicals and pesticides, and there is no pure water left on our planet.

As with all foundational supplementation, we supplement the difference between what we ingest and what our body needs. If you eat a lot of organic green vegetables, legumes and grains, your foundational supplementation will be less than someone who eats more processed foods.

Magnesium deficiency has far-reaching impact on health and well-being. Evidence has linked insufficient intake to a variety of conditions and symptoms, from simple irritability to chronic pain to life-threatening disease.

DE-STRESS with GO Magnesium Extreme!

What Does Magnesium Do and How Important Is It?

Most nutritionists agree that the government's recommended intake for magnesium is below the level needed for optimal health. Yet, less than 25% of Americans get even that minimal amount.

This practical magnesium deficiency can cause countless health challenges.

Magnesium interacts with over 300 biological functions; more than any other essential nutrient. It is required for cardiovascular health and helps maintain healthy blood sugar levels. It helps keep the heart rhythm steady and it helps prevent cramps and muscle soreness.

Magnesium is indispensable for energy production, aids in nerve function, and helps combat the negative effects of life's daily stress.

Magnesium supports the immune system, promotes normal blood pressure and keeps bones strong.

GO Magnesium Benefits

- ✓ **Immune System Support**
- ✓ **Keeps Bones Strong**
- ✓ **Aids Calcium Absorption**
- ✓ **Keeps Heart Rhythm Steady**
- ✓ **Helps Hormonal Balance**
- ✓ **Bio-Available & Body Soluble**
